

TASK 01

Cyber Security Tasks & Instructions — CodeAlpha

SUBMITTED BY: Rida Fatima

Task No. 1

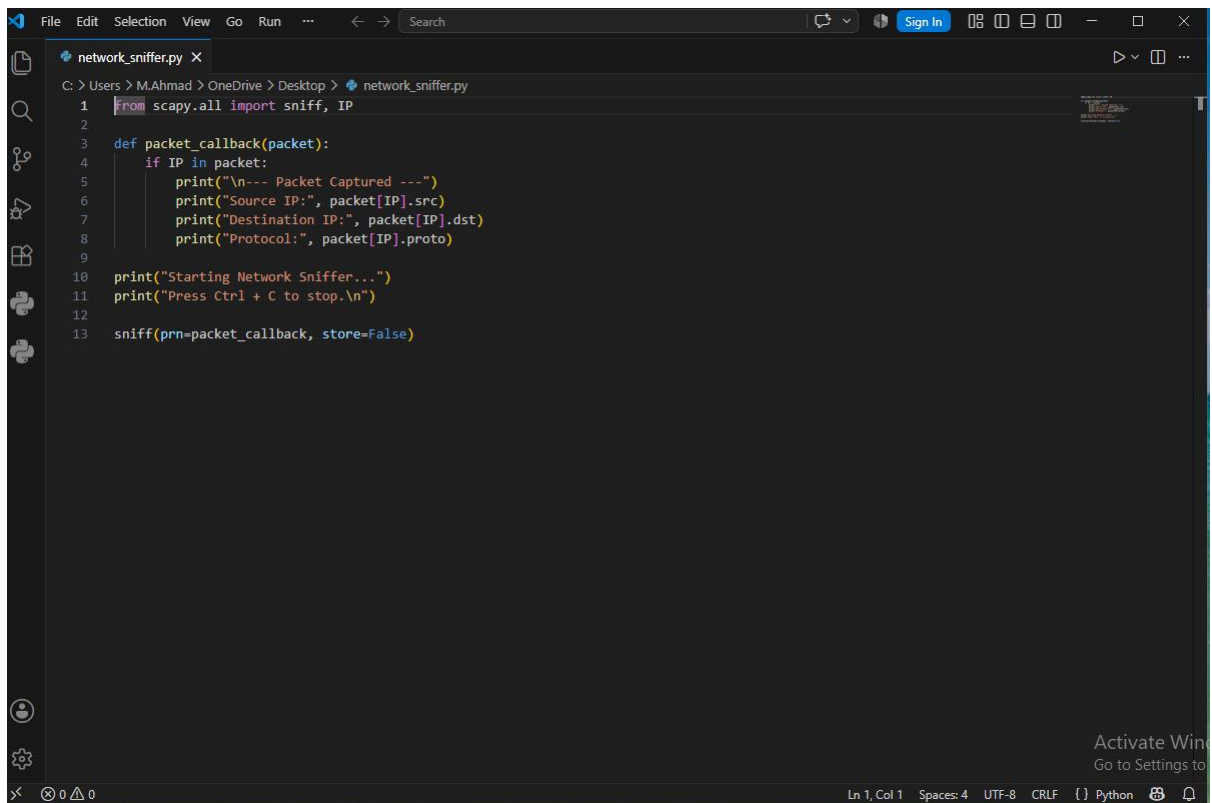

Basic Network Sniffer

1. Build a Python program to capture network traffic packets.
2. Analyze captured packets to understand their structure and content.
3. Learn how data flows through the network and the basics of protocols.
4. Use libraries like `scapy` or `socket` for packet capturing
5. Display useful information such as source/destination IPs, protocols and payloads..

Basic Network Sniffer Submission Steps:

Step 1: Python Code

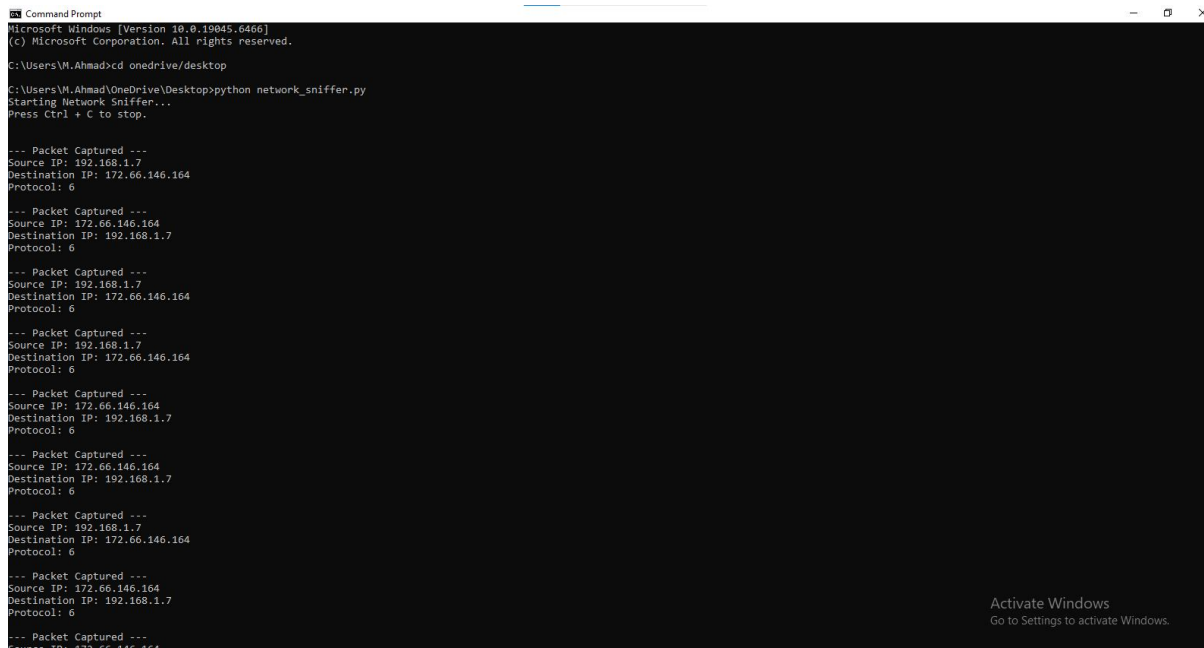

Attach a screenshot of your network_sniffer.py code.

```
1 from scapy.all import sniff, IP
2
3 def packet_callback(packet):
4     if IP in packet:
5         print("\n--- Packet Captured ---")
6         print("Source IP:", packet[IP].src)
7         print("Destination IP:", packet[IP].dst)
8         print("Protocol:", packet[IP].proto)
9
10 print("Starting Network Sniffer...")
11 print("Press Ctrl + C to stop.\n")
12
13 sniff(prn=packet_callback, store=False)
```

Step 2: Program Output

Attach a screenshot showing the network packets captured by the program..

```
